

## RIDUTTORI EPICICLOIDALI ANGOLARI *RIGHT-ANGLE PLANETARY REDUCERS*

- Combina un riduttore epicicloidale ad un rinvio angolare a 90° a dentatura spiroidale.
  - Soluzione compatta e salvaspazio.
  - Consente di ottenere, oltre ad una riduzione, il trasferimento del moto lungo assi ortogonali.
  - Grande varietà di rapporti.
  - Numerose combinazioni e la possibilità di essere montati in qualsiasi posizione ed orientamento, li rendono addatti alle più svariate opzioni di impiego.
  - Silenziosità, con l'ingranatura a denti spiroidali che contribuisce a ridurre le vibrazioni e la rumorosità.
  - La struttura, in alluminio e acciaio trattati superficialmente, assicura un peso ridotto e ne permette l'utilizzo anche in ambienti gravosi.
  - Il design, oltre ad offrire un'elevata flessibilità costruttiva, garantisce un'ampia compatibilità per retrofit immediati e innumerevoli possibilità nello sviluppo di progetti.
  - Questo modello, realizza un sistema intelligente, per le applicazioni che utilizzano il rinvio angolare, con un buon compromesso di precisione, affidabilità e rendimento.
- 
- *The instrument combines a planetary gearbox with a 90° spiral bevel gearbox.*
  - *A compact and space-saving solution.*
  - *Allows a speed reduction and a right-angle transfer of motion.*
  - *Many ratios available.*
  - *Numerous combinations and the possibility of being mounted in any position and orientation, making them suitable for many applications.*
  - *Silent operation by the means of the spiral gears, which reduces vibrations and noise.*
  - *The housing, in aluminum and surface treated steel, ensures low weight and allows use even in harsh environments.*
  - *The design, in addition to offering high configuration flexibility, guarantees a wide compatibility for immediate retrofits and countless integrations possibilities.*
  - *This model realizes an intelligent system for applications that use angular gearboxes, with a good compromise on precision, reliability and performance.*

<b>AV = 50 - AL = 1</b>	<b>AV = 50 - AL = 1</b>	<b>AV = 250 - AL = 1</b>	

Per la determinazione del rapporto e della forma costruttiva fa fede l'albero veloce, raffigurato sempre in basso nei disegni di ingombro.

☞ in fase d'ordine indicare sempre per primo l'albero veloce (gli altri alberi si definiscono seguendo il senso orario).

*The ratio and configuration is determined by always showing the fast shaft on the bottom of the drawing.*

☞ when ordering, always indicate the fast shaft first (the other shafts are defined following the clockwise direction).
